#### Angle and Overview:

This project page will showcase the individual aspects of being a web designer or web developer and the crossover similarities. I wouldn't consider this topic to be quite overwhelming or underwhelming, I feel as if the content offers enough sustenance to provide a reasonable amount of content for the project. A web designer tends to handle the more creative side of bringing a website to life. These people focus on the look and feel of a website. Color scheming, design fundamentals, and information flow will all be large considerations in their work. Web designers mainly use HTML and CSS when they code. A web developer creates the inner workings and server-talk functionality behind a website. They will build user interfaces using programming languages such as PHP, .NET, Python, C, and Ruby. Salary of a Web Designer begins at around \$50,000 and caps at around \$75,000 but can be greater depending on the circumstances of the designer. The salary of a web developer begins at around \$50,000 but could cap around about \$86,000 or greater depending on the circumstances.
