

What I have learned this semester...

I have learned a lot this semester about the breadth of the web. It was a dense semester content-wise. There are so many areas and facets within web design to consider, and it can seem quite overwhelming. There is semantic-ui, BootStrap, javaScript, and so much more! How can you choose? I learned that I will always be learning and discovering new tools and techniques. The process of learning will never end. I have learned that with enough time nearly all tools can be somewhat mastered, or at least the beginnings of using them. The number of areas we touched on this semester is large and vast. I feel much more comfortable in my ability to take on new projects. There are areas I have really enjoyed and would like to do more of (prototyping, CSS3 animations, personas). I have also learned that when I am first learning the new tools and techniques I don't spend as much time on the design as I would like. That is something I am looking forward to incorporating in future page designs. I did enjoy learning about all these new things. I wish I had been able to spend more time in each area, but that will have to be what happens in the future.
